

FIRMICORE

MAINTENANCE MANAGEMENT PLATFORM

Keep every machine running. Keep every team in sync.

One platform for breakdowns, work orders, preventive maintenance, spare parts, safety, training and improvement, built for every person on your plant floor.

Breakdowns

Work Orders

Preventive Maintenance

Inventory

QR Codes

MOE

TPM and 5S

Triage

Safety

Maintenance should not run on **paper, chat groups and memory.**

When breakdowns are reported by phone call, spare parts are counted by hand and PM schedules live in a spreadsheet, downtime grows and knowledge walks out the door at every shift change.

Without a system

- Breakdowns reported late or lost
- Repeat failures nobody tracks
- Missed preventive maintenance
- Parts out of stock at the worst time
- No clear view of machine health

With FirmiCore

- Every breakdown logged in seconds with a QR scan
- Full history for every machine
- PM scheduled, assigned and tracked
- Stock, issuing and purchase orders in one place
- Live dashboards for every role

One platform. Nine roles. One version of the truth.

From the floor operator reporting a fault to the plant manager reviewing performance, everyone sees what they need and nothing they do not.

Everything your maintenance team needs, **built in.**

1

Machine Registry

A complete asset register with QR codes, service history and an automatic machine health score from 0 to 100.

2

Breakdowns

Report, acknowledge, assign and close faults with severity levels, photos, voice notes and root cause analysis.

3

Work Orders

Create, assign and track jobs through to supervisor approval, with each technician's own task list.

4

Preventive Maintenance

Recurring schedules, a calendar view, workload planning and compliance tracking so planned work does not slip.

5

Inventory and Parts

Spare parts catalog, stock history, issuing to jobs, purchase orders and low stock alerts.

6

Contractors

Manage external contractors and their jobs, parts used and invoices next to your own team.

7

Shift Handovers

Structured handover briefings so nothing is lost between shifts.

8

Training and Safety

Training modules, certificates, safety cases and permits to work in one workspace.

9

Cost Analysis

See downtime cost and maintenance cost per machine, split into parts, labor and contractor spend.

10

Bulk Import

Load machines, parts, suppliers and users from Excel or CSV sheets instead of typing them in.

AI Suggestions

After a breakdown is reported, FirmiCore suggests likely causes and fixes based on that machine's past work orders and root cause records. In audits, AI turns findings into probable causes and recommended actions. Your team stays in charge: every suggestion comes with a reminder to cross check it.

QR CODES EVERYWHERE

Scan it. Done.

Report a breakdown

Every machine gets its own QR sticker. Anyone can scan it with a phone camera and report a fault straight away, with the machine already selected.

Check in at the machine

Technicians scan the machine QR to confirm they have arrived and start the work order.

Scan and issue parts

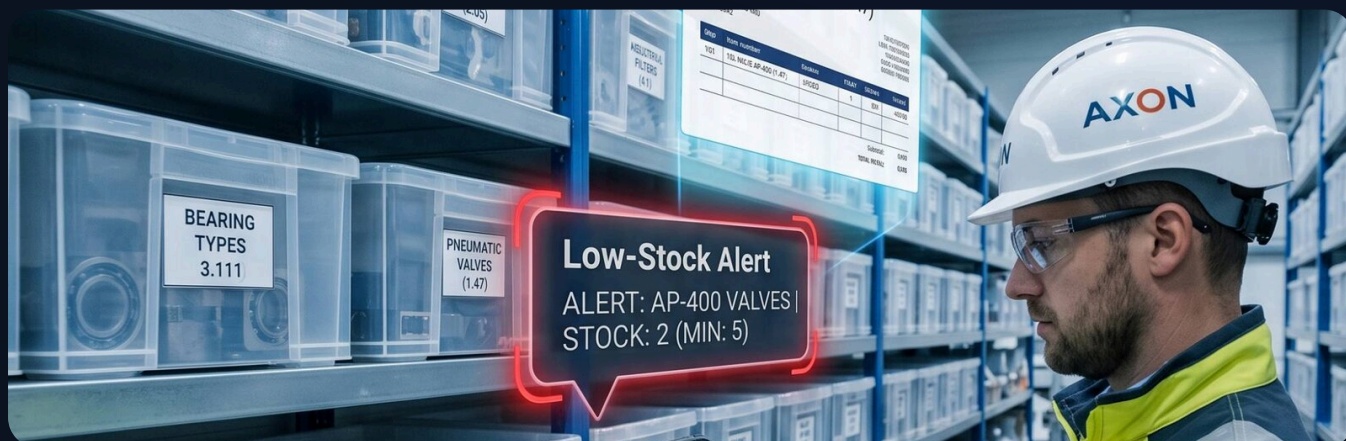

Scan a part QR code, or search by name or number, to issue it directly from stock to a job.

Scan for purchase orders

Scan parts when building a purchase order, and get low stock alerts before you run out.

Fast on the floor

No typing machine names, no hunting for part numbers. One scan puts the right record in front of the right person.

Report a breakdown with your voice.

Not everyone on the floor likes typing. In FirmiCore an operator can simply press the microphone, describe the fault in their own language, and the report is filled in for them.

Voice breakdown reports

Dictate the problem instead of typing it. Works on the public QR report page too, so no login is needed to raise an alarm.

Speak in your own language

Choose the language you speak before you dictate. Voice input supports many languages, so every operator can use their own.

Automatic translation

What was spoken is translated into the language your team reads, so a report spoken in one language is understood by a supervisor who reads another.

Multiple language support

The whole app supports multiple languages. Each person selects their own language, and the screens change to match.

Everyone can speak up

Triage guidance is also available in multiple languages, so safety steps are clear to every operator.

Verify all safety protocols before beginning operations.

在開始任何操作之前，請核實所有安全協議。

Überprüfen Sie vor Betriebsbeginn alle Sicherheitsprotokolle.

Verifique todos los protocolos de seguridad antes de iniciar operaciones.

Know what downtime **really** costs.

Downtime cost analysis

Set an hourly downtime cost on each machine. FirmiCore applies it to the hours lost and shows the total cost of downtime every month.

Maintenance cost analysis

Total maintenance spend per machine, broken down into parts, labor and contractor cost, so you can see which assets cost you the most.

Contractor management

Keep a contractor list, raise external jobs, record parts used, attach invoices and follow each job through to completion.

Automatic PO emails

When a purchase order is approved, the email goes to the supplier automatically. No copying and pasting, and nothing forgotten.

Import from Excel or CSV

Bring in machines, inventory parts, suppliers and users from your existing sheets using ready made templates, with a check before anything is saved.

Reports you can export

Build reports for management and export them as PDF or spreadsheet, ready to share.

Multiple plants

Every machine and user belongs to a plant, so each site keeps its own data. The Enterprise plan adds multi site management to oversee all your plants together.

Departments

Organise machines, people and breakdowns by department. Filter dashboards and lists by department, and assign training to whole departments at once.

Less admin, more uptime

Stock alerts, supplier emails and bulk imports take the repetitive work off your store keeper and supervisors, so they can focus on keeping machines running.

Measure it. Fix it. Keep improving.

MOE: Machine Overall Effectiveness

Track MOE for every machine, see the plant average, follow trends over time and compare machines side by side to find where effectiveness is lost.

TPM and 5S in one audit system

TPM, 5S, MOE and contractor audits run through one linked audit module. Enterprise adds a TPM maturity roadmap and a 5S scorecard.

Triage: guided troubleshooting

Branching decision trees guide anyone through safe first steps for a fault, in the language each person selects. Build your own flows with the Triage Builder.

Kaizen

Capture improvement ideas from the floor and follow them through to results.

Analytics and Reports

Dashboards for breakdowns, work orders, PM and contractors, plus exportable reports for management.

Safety Workspace

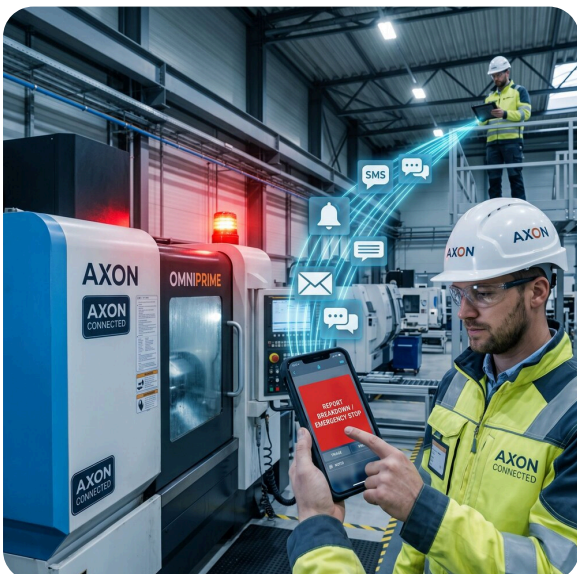

Safety cases for incidents, near misses and hazards, permits to work, and safety training sessions.

AI root cause suggestions

Probable causes and recommended actions generated from your own audit findings and machine history, ready for the team to review.

Instant notifications

Device and in app alerts tell the right people the moment a breakdown, overdue task or approval needs attention.

Secure by design

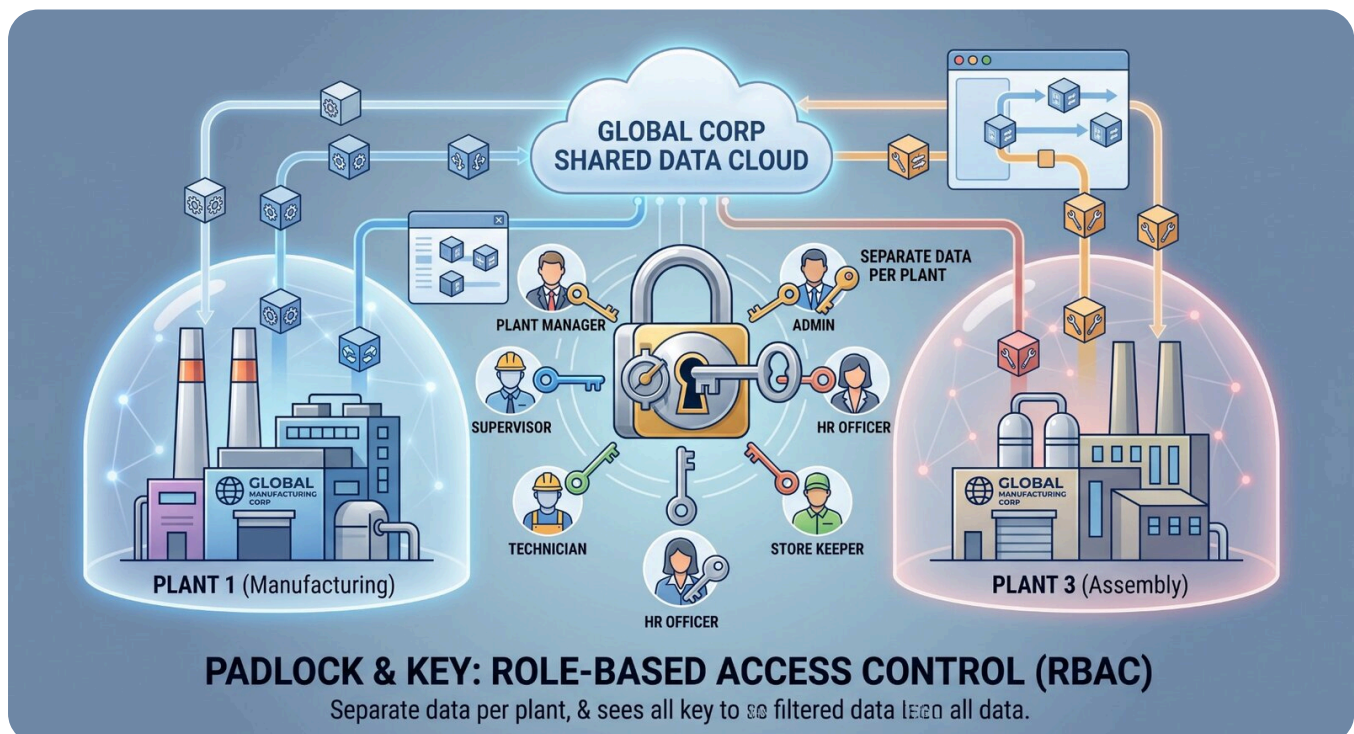

Every company's data is isolated and access is controlled by role, enforced on the server and not only on screen. Multiple language support, with instant device notifications for the people who need to act.

The right view for the right person.

Role	What they get
Admin	Full control: users, settings, billing and every module.
Plant Manager	Manager dashboard, analytics, MOE and oversight of the whole site.
Supervisor	Assign work, approve jobs, manage PM, shifts and handovers.
Technician	Their own work orders, breakdowns and PM tasks on any device.
Store Keeper	Parts, stock levels, scan and issue, and purchase orders.
HR Officer	Training, evaluations, compliance and contractor oversight.
Safety Officer	Safety cases, permits to work, safety training and company wide visibility.
Floor Operator	Report a breakdown fast with a QR scan and follow guided troubleshooting.
Trainee	A structured learning programme with modules and certificates.

Everyone on the same page

Each role lands on a dashboard made for their job, so the right information is always the first thing they see.

PRICING PLANS

Simple plans that grow with you.

Pay monthly, or pay yearly and save 20 percent. Prices in US dollars.

Basic

For a single small team getting started.

\$29

per month
\$278 per year

- 10 machines
- 5 users
- 10 inventory items
- 10 PM schedules
- 50 work orders per month
- Machine registry and QR codes
- Breakdown reporting

Workshop

For growing workshops with structured workflows.

\$59

per month
\$566 per year

- Everything in Basic
- 100 machines
- 20 users
- 10,000 inventory items
- Unlimited PM and work orders
- QR scan and low stock alerts
- Automatic PO emails
- Contractors, shift handover, training and safety

TOP PICK

Factory Pro

Full MOE analytics for production facilities.

\$249

per month
\$2,390 per year

- Everything in Workshop
- 1,500 machines
- 100 users
- Unlimited inventory
- MOE trend analytics and machine comparison

Enterprise

Unlimited scale with enterprise integrations.

Let's talk

Custom pricing

- Everything in Factory Pro
- Unlimited machines and users
- Multiple sites
- TPM maturity roadmap and 5S scorecard
- Triage knowledge builder
- Advanced reports hub
- SSO and SAML
- Custom integrations and API
- Dedicated support and SLA

About us

FirmiCore is a product of Lumora Ventures PVT Ltd, a company registered in England and Wales (company number 16159220) with an office in Sri Lanka. We build software that helps factories and workshops keep their machines running.

The Lumora Ventures portfolio

Four products. One vendor. One agreement.

FirmiCore

firmicore.com

Maintenance, spares, safety and training for process plants.

VoxWel

voxwel.com

Anonymous employee reporting, encrypted and GDPR compliant.

Rectifia

rectifia.com

Workplace misconduct reporting and investigation case management.

OffboardSet

offboardset.com

Structured employee offboarding: accounts, equipment, access, handover.

Already running FirmiCore? Adding a second product means no new procurement cycle and no new integration project. Ask about portfolio pricing.
