Training modules (authored)	—	**25**	**250**	**Custom**
Shift handover · Safety cases & work permits	—	**✓ no record cap**	**✓ no record cap**	✓
DATA, FILES & AI				
Closed records online: plant manager / admin (others: 30 days)	**12 months**	**12 months**	**12 months**	**Custom**
Largest single file	100 MB	100 MB	100 MB	Custom
AI credits per month (1 = plain call, 6 = web-research call)	**20**	**150**	**800**	**Custom**
Analytics history (summaries kept)	**12 months**	**36 months**	**All**	**Custom**
Scheduled reports	—	**5**	**50**	**Custom**

No storage quota. Closed records: supervisors 30 days, plant manager / admin 12 months, then a ZIP with attachments for your admin; older records on request (page 3). Enterprise: limits and price set per contract.

FIRMICORE · MAINTENANCE MANAGEMENT

What each plan includes

Features by plan, add-ons and trial.

	Starter	Growth	Factory	Enterprise
Machine registry with QR codes · breakdown reporting · work orders · PM scheduling	✓	✓	✓	✓
Inventory & parts catalog · stock movements	✓ **small**	✓	✓	✓
Automatic archive: older files exported to a viewable ZIP and delivered to the company admin	✓	✓	✓	✓
13 interface languages incl. Sinhala & Tamil · installable phone web app	✓	✓	✓	✓
Core dashboard · reports with PDF export · staff requests	✓	✓	✓	✓
AI root-cause suggestions & translation (within credits)	✓	✓	✓	✓
Contractor management & contractor safety cards	—	✓	✓	✓
Shift handover · training workspace · safety workspace	—	✓	✓	✓
Scheduled reports & Google Sheets export	—	✓	✓	✓
MOE / OEE analytics	—	—	✓	✓
Audits (TPM, 5S, contractor) · Kaizen · evaluations · triage builder	—	—	✓	✓
Multi-plant management	—	—	—	✓
Support	Email	Email, priority	Priority + onboarding call	Named contact

Add-ons (any paid plan)

- Extra full user — **$10** / month each
- Extra 10 light users — **$5** / month
- Extra 25 machines — **$10** / month
- Extra 1,000 inventory parts — **$10** / month
- +12 months of online history for plant managers / admins — **$5** Starter · **$15** Growth · **$60** Factory / month
- 500 AI credits — **$25**

Free trial & billing

- **14-day free trial**, no card — all modules except multi-plant; 20 AI credits, Starter record limits.
- Monthly or yearly (yearly = 2 months free).
- Limits are checked live; at a limit the user sees an upgrade prompt, nothing is lost.
- Enterprise is a custom quote, invoiced by Lumora under an annual contract; every limit is agreed in writing.

FIRMICORE · DATA & PRIVACY

Who sees what, and for how long

The same on every plan. Proposed policy — effective for new customers; existing customers get 90 days' notice and an archive copy first.

Data	Supervisors & other staff	Plant manager & admin	After that	Kept for analytics
Closed work orders and breakdowns	30 days after closing	12 months, with attachments	ZIP archive with attachments to the admin, then removed online	Per-record summary + monthly rollups
Closed work permits	30 days (safety officer: like plant manager)	12 months, with attachments	ZIP archive to the admin; keeping permit records as long as the law requires is the company's responsibility	Per-record summary
Older records, for a supervisor	Raise a request in My Requests → a plant manager (of their plant) or an admin approves → read-only copy with attachments for 24 hours to 30 days		Records older than 12 months: the admin hands over the archive ZIP	—
Training in progress / completed	Trainee and managers see the certificate	Certificate + results summary	Progress and quiz answers cleared 30 days after the certificate is issued	Scores, attempts, dates, signer, expiry
Training certificates	Own certificate	All, PDF on demand	Kept	—
Trainee programme	—	Certificate with final mark and module scores	Programme, weekend summaries and files cleared 30 days after certification	Results summary
Notifications	Cleared once every recipient has read them; never kept longer than 30 days		—	—
Everything else	Machines, inventory, suppliers, purchase orders, contractors, audits, Kaizen and users are not affected by this policy.			

How your data stays safe

- Nothing leaves online storage until your admin has the ZIP (or 60 days after the first notice, as agreed in the terms). The ZIP opens without FirmiCore and is kept 12 months more for re-download.
- A legal-hold switch stops archiving and removal for a company or a record.
- Summaries used for dashboards, MTBF/MTTR, contractor and technician scores, and AI repair suggestions are kept, so analytics keep working after the detail is gone.
- Every removal is written to an audit log.

Still to be confirmed

- Safety cases: same 30 days / 12 months as work permits?
- Whether supervisors keep a one-line repair log per machine (date, fault, cause, fix).
- Local legal retention periods for permits, incident and training records.
- Terms wording for the 60-day automatic removal.

INTERNAL — DO NOT PUBLISH

Market price benchmarks

Compiled 16 Oct 2026 from vendor pricing screenshots you supplied and third-party review sites (vendor pages could not be opened from our environment). Sources disagree — confirm before quoting.

Vendor	Model	Free tier	Entry	Mid	Top	What they gate / published limits
MaintainX	per user	Basic (2 repeating PMs, 1-mo analytics)	Essential $20 yr / $25 mo	Premium $65 yr / $75 mo	Enterprise custom	Parts, POs, meters, API at Premium; multi-site/SSO at Enterprise; unlimited requesters; no storage limit published
UpKeep	per user	Lite (3 techs, one source)	$20–24	$45–55	$75 / custom	Starter caps requesters (5); parts & POs from Professional; SSO/API top tier
Limble	per user	none (disputed)	Standard ≈ $28	Premium+ $55–79	Enterprise custom	1 location on Standard; spare parts, POs, offline, API at Premium+; unlimited assets/WOs
Fiix	per user	Free (25 active PMs)	$45	$75	custom	Free keeps unlimited WOs & requests
Hippo CMMS	per user	—	$35	$55	$75	Third-party listing; setup fee mentioned
eMaint / MicroMain	per user	—	$69 / $89	$85	$120	Enterprise-style; listings conflict with "get a quote"
MaintenancePro (screenshot)	per user	—	$30	$50	$80	Operators included (10 / 20 per full user); 50 / 500 / unlimited vehicles; parts, POs, barcodes at $50; automations, GPS, SSO at $80
FixAhead (screenshot)	whole bill	Free: 2 users or 50 assets · 2 GB	—	Pro $99 (10 users or 100 assets)	—	Unlimited storage on Pro; +$10/user or +$10 per 10 assets; annual −33%
Atlas CMMS	flat / open source	Self-hosted free, unlimited users	Cloud from $10 flat (or $15/user)	—	Commercial licence	Unlimited requesters & viewers on cloud
Local: Facilitypal (Sri Lanka) · ReliaMaint (India)	per account	ReliaMaint: free version	from $15 / month	scales with users	—	Thin listings, no published rupee price sheets

Reading the market

- Per-user pricing dominates: entry **$16–30**, mid **$45–75**, top **$75–120+** per user per month.
- Whole-company flat pricing exists at the low end (FixAhead $99, Atlas $10–15) and is what South Asian SMEs find easiest to buy.
- Free tiers are common, always capped on PMs, assets, users or storage — never on features.
- Inventory/POs, API, SSO and offline are the usual upsell gates.
- Nobody we found publishes a storage cap except FixAhead (2 GB free, unlimited Pro) — so we set none: files stay online for a plan-based window, older ones go to a downloadable ZIP.

Where our price list lands

- Starter $25: 3 full + 10 light users. Per-user tools charge ≈ $60 for 3 users; local floor is ≈ $15.
- Growth $89: below FixAhead's $99 and a fraction of 10 × $45–75 per-user bills ($450–750).
- Factory $379: 40 × $50–65 = $2,000–2,600 elsewhere.
- Enterprise custom quote (min. $1,000/mo): e.g. 60 full + 200 light users and 600 machines ≈ $2,260/mo, against $3,000–3,900 for 60 per-user seats elsewhere.

Features & data limits vs the market

FirmiCore column is from our code; the market column is where reviewed vendors place the same feature.

Feature	FirmiCore today	FirmiCore plan (proposed)	Typical market placement
Work orders, PM scheduling, QR, breakdown reporting	Built	All plans	Entry tier (free tiers cap PMs/assets)
Inventory, POs, auto-PO email, low-stock	Built	Small catalog Starter; full Growth+	Mid tier (MaintainX Premium, UpKeep Professional, Limble Premium+)
Meter / condition-based PM triggers	Built	All plans	Mid tier (MaintainX Premium)
Contractor management & safety cards	Built	Growth+	Rarely bundled in CMMS entry tiers
Safety cases, permit-to-work, training, shift handover	Built	Growth+ (no record cap)	Not found in reviewed price sheets — differentiator
Audits (TPM/5S/OEE), Kaizen, MOE analytics	Built (TPM/5S module not routed)	Factory+	Advanced analytics at upper tiers
AI root-cause & translation	Built (Claude)	All plans, credit-limited	AI copilots mostly Enterprise-only
13 languages incl. Sinhala, Tamil, Hindi, Urdu	Built (completeness unverified)	All plans	Mostly English + major EU languages — regional advantage
Multi-plant management	Built	Enterprise	Enterprise tier
Gaps: native iOS/Android apps · offline mode · SSO · public API · IoT integrations	Not built (installable web app only; no offline persistence configured)	Do not advertise	Offline at Limble Premium+; API/SSO at top tiers; native apps at all

Data-usage limit	What the market publishes	Our approach
Work orders	Almost always unlimited (even Fiix / MaintainX free tiers)	Monthly caps set ≈ 4–6× typical use (≈ 2–4 WOs per machine per month, an assumption) so normal plants never hit them; Enterprise unlimited. Could be changed to soft "fair use" if it hurts sales.
Assets / machines	50 / 500 / unlimited (MaintenancePro); 50–100 (FixAhead); unlimited at Limble & MaintainX	15 / 75 / 400 / unlimited — a value limit, machines are cheap to hold
Users & requesters	Per paid user; requesters / viewers usually free and unlimited	Light-user pools (10 / 50 / 250) mirror free requesters but keep a ceiling
Storage	Mostly unpublished; FixAhead 2 GB free, unlimited Pro	No GB quota. Closed records stay online 12 months for plant managers / admins (30 days for supervisors), then go to a ZIP archive for the admin (page 8)
Inventory parts	Gated by tier, rarely counted	100 / 2,000 / 10,000 — protects whole-catalog read cost
AI	Enterprise-only copilots; credits rarely published	Credits per plan (20 / 150 / 800) — our biggest variable cost

INTERNAL — DO NOT PUBLISH

How we compare

Competitor figures from their public pricing pages (screenshots supplied) and third-party summaries; verify before quoting.

	MaintenancePro (fleet)	FixAhead	Others (3rd-party sources)	FirmiCore (proposed)
Pricing model	Per user: $30 / $50 / $80; "operator" users included per full user (10–20)	Free + Pro $99 *whole bill*; charged the cheaper of per-user or per-asset model	Per user: MaintainX $20 / $65, Fiix $45 / $75, UpKeep $24 / $55, Limble $28+	Flat plan price with seat pools; add-ons priced per unit
Entry tier	$30/user · 50 vehicles · single location	**Free forever**: 2 users + unlimited assets, or 50 assets + unlimited users · 2 GB · unlimited work orders	Free tiers on MaintainX / Fiix (limited)	Starter $25: 3 full + 10 light users · 15 machines · 60 WO/mo · 12-month online records
Mid tier	$50/user · 500 vehicles · multi-location · parts inventory, POs, barcoding, e-signatures	Pro $99: 10 users or 100 assets (unlimited of the other) · **unlimited storage** · +$10/user or +$10/10 assets · annual −33%	—	Growth $89: 10 full + 50 light users · 75 machines · 400 WO/mo · 12-month online records · contractors, training, safety, shift handover
Top tier	$80/user · unlimited · automations, GPS, SSO	Custom / demo	Enterprise: custom	Factory $379 · Enterprise custom quote (from $1,000/mo, limits set per contract)
Annual discount	≈ 2 months free	20% quarterly, 33% annual	Typically 15–20%	2 months free (≈17%)

Same customer, monthly bill	**FirmiCore**	**FixAhead Pro**	**MaintenancePro**	**MaintainX (full users only)**
Small shop: 3 full + 10 operators, 15 machines	**$25**	$0 (Free tier)	$90	$60 (Essential)
Plant: 10 full + 50 operators, 75 machines	**$89**	$99	$500	$650 (Premium)
Large plant: 40 full + 250 operators, 400 machines	**$379**	≈ $399 (asset model)	≈ $2,000	≈ $2,600 (Premium)

What this tells us

- At the bottom, FixAhead's free tier beats any paid starter on price; we win only on breadth (9 roles, safety, training, AI), so keep Starter cheap ($25; local listings start near $15) and tightly limited rather than free.
- At Growth we are $10 under FixAhead Pro but they offer unlimited storage and work orders; our edge is the modules they do not have.
- Against per-user tools we are 60–85% cheaper for plants with many operators — lead with the operator seat pool.
- Their seat-ratio idea (operators per full user) maps to our light-user pools; their "cheaper of two models" is attractive but harder to meter — not adopted.

Caveats

- Competitor prices change; MaintainX/Fiix/UpKeep/Limble figures come from third-party comparison sites that disagree.
- No Sri Lanka / South Asia CMMS price data was found — pilot with real prospects; consider LKR/INR prices.
- MaintenancePro: Basic ($30) for the small shop, Premium ($50, 500 vehicles) for the others, operators included. MaintainX counted for full users only at annual list ($20 Essential / $65 Premium); requesters are usually free there.

INTERNAL — DO NOT PUBLISH

Why these limits & unit economics

Limits sit where usage creates cost (reads, files, AI), not on features that cost nothing to hold.

Where the system spends money (from the code)

- **Reads:** 215 live listeners; dashboards rebuild from full history. Several inventory screens (stats, company parts, low-stock alerts, supplier picker) subscribe to the **entire parts catalog** — cost grows with parts × users. → parts and history-window limits.
- **Machines** are paginated (cheap to hold) — the machine cap is a value limit, not a cost limit.
- **Work orders / breakdowns / PM:** each lifecycle fires several triggers and photos; caps also bound media volume and trigger fan-out.
- **Files:** permanent, create-only, uncompressed photos; videos up to 500 MB. → online window + ZIP archive (page 8), not a GB quota.
- **AI:** Sonnet 5 $2/$10 per MTok; web search $10 per 1,000. Only per-user/hour and per-company/day caps today.
- **Not capped on purpose:** safety cases, work permits and shift handovers — compliance records.

Unit economics at full use (USD / month)

Plan	Price	Est. cost	Margin	If reads ×3
Starter	$25	$4.1	**84%**	73%
Growth	$89	$16.1	**82%**	68%
Factory (10k parts)	$379	≈ $84	**78%**	57%
Enterprise quote A (p.11)	$2,262	$226	**90%**	86%
Enterprise quote B (p.11)	$5,567	$745	**87%**	77%

Cost = storage $0.026/GB + downloads $0.15/GB (4%/mo) + Firestore reads $0.06/100k (20k/full user/day, 4k/light user/day, plus whole-catalog inventory listeners) + AI $0.02/credit + $1–10 fixed + Stripe 3.4% + $0.30. Cloud Storage and Firestore rates are from search results of Google's pricing pages; read volume, photo size (16 MB/WO) and AI cost per call are **assumptions to measure**. Margins use typical file volume (25% of the record caps); with every record cap fully used and the online window full they are 81% / 77% / 71% for Starter / Growth / Factory.

Engineering that raises margin (so limits can loosen later)

- Replace whole-catalog parts listeners with paginated / aggregated reads → Factory part cap can move 10k → 25k+.
- Pre-aggregate dashboard data (`analytics_monthly/daily`) instead of scanning history.
- Compress work-order and breakdown photos on upload (≈ −80% storage).
- Route plain AI calls to Haiku 5.5 (~20× cheaper); keep Sonnet for web research.

Decisions needed before launch

- Approve prices ($25 / $89 / $379) and the limits above; Enterprise is quoted from the table on pages 10–11.
- Approve new feature gates: audits, Kaizen, evaluations, triage builder, scheduled reports (currently open to all plans).
- Free tier? Not recommended yet; spec if wanted: 1 full + 2 light users, 5 machines, 20 WO/mo, 500 MB, no AI (≈ $0.5/mo each).
- Archive-and-purge policy (page 8): files removed from online storage after the admin downloads the ZIP, or after 60 days from the first notice — irreversible, needs a terms notice. Same for churned accounts (90 days).
- Enterprise SSO / public API / SLA are **not built** — do not advertise.

Keep files online for a window, then archive and hand over

No storage quota for customers. Cost is bounded by time instead: after the online window, files leave online storage as a ZIP that opens without FirmiCore.

1 · Upload
photos, video, documents on work orders, breakdowns, audits…

→

2 · Online window
plant manager / admin: 12 months after the record closes (supervisors: 30 days); extendable as an add-on

→

3 · Archive job
monthly: pack each quarter's files + record summaries into a ZIP, verify checksums

→

4 · Admin handover
email + Settings → Archives; download; confirm. Reminders at 14 and 30 days

→

5 · Remove online copies
after confirm, or 60 days after first notice; record keeps an "archived" marker; ZIP kept 12 months cold

What the ZIP contains (works offline, years later)

- **index.html** — self-contained viewer: search by date, machine, WO / ticket number; opens by double-click, no server or login.
- **records/<number>/** — detail PDF (same content as today's Maintenance History export), `record.json`, and **attachments/** with every file of the record in its original format and name: work-order documents, field media, completion photos, CAD, warranty and approval-request files; breakdown media; audit evidence and report PDFs; Kaizen and evaluation files; staff-request and reply attachments; PO invoices. `record.json` lists each one with size, uploader, date and SHA-256; any file no longer found is listed under `missing`.
- **data/** — CSV and JSON of every archived record (machine-readable).
- **manifest.json** — archive id, company, period, counts, SHA-256 of every file, format version; **README.txt** — how to open and verify.
- Split into ≤ 2 GB parts (ZIP64); standard formats only (PDF, JPEG, MP4, CSV, JSON, HTML).

What is archived — with its attachments

- **Exported, then removed online:** closed work orders and breakdowns, completed audits, closed Kaizen, closed staff requests (replies included), paid PO invoices — always together with all their attachments.
- **Retired master data** (decommissioned machines, inactive contractors, discontinued parts): exported with their photos, manuals, certificates and warranty files 24 months after retirement, then removed.
- **Copied, never removed:** safety training submissions and certificates, training certificates, offboard reports — compliance copies go into the ZIP too.
- **On demand:** the admin can request a full-company export (all records + all attachments) at any time; it also runs automatically when a company is closed.
- **Never touched:** live files of active machines and contractors, training content library, logo. A legal-hold flag stops archiving and removal.

How it runs (Cloud Functions + Cloud Tasks)

- `scheduleArchiveRuns` (monthly) lists eligible records per company, creates `companies/{id}/archives/{archiveId}`.
- `buildArchive` streams objects into a ZIP written straight to the bucket (cold class), one task per part; verifies checksums.
- `purgeArchived` deletes originals with the Admin SDK (bypasses create-only rules), marks Firestore docs, writes an audit entry.
- Because old links are download-token URLs, every screen that shows files must show an "Archived in <archive>" tile instead of a broken image.
- Effort ≈ 3–4 weeks: lifecycle rule 0.5 d · build 6–8 d · delivery UI + emails 4 d · purge + placeholders 5–6 d · final export on deletion 2 d.

Cost of keeping files (USD / month)

Plan @ record caps	Online	Archive + delivery	No policy yr 3 / yr 5
Starter (12 mo)	$0.55	$0.24	$1.6 / $2.6
Growth (12 mo)	$3.8	$1.7	$11 / $18
Factory (12 mo)	$25	$10.7	$71 / $117

Cloud Storage per GB-month: Standard $0.026, Nearline $0.015, Coldline $0.007, Archive $0.0024 (US multi-region); delivery = one download per archive at ≈ $0.15/GB (assumed). At typical use (25% of caps) the totals are about a quarter. Extending the online window by 12 months costs ≈ $0.5 / $3.6 / $23 at caps — priced as an add-on ($5 / $15 / $60). Quick win first: a lifecycle rule moving files older than 12 months to Nearline keeps every link working and cuts the storage cost of older files by ≈ 40% (≈ 20–30% overall).

INTERNAL — DATA LIFECYCLE

Retention policy: what must be built first

From the code review (docs/DATA_RETENTION_AND_VISIBILITY_PLAN.md). Deleting before step 1 would empty the analytics.

Why not just delete

- **Analytics read raw closed records:** browser dashboards (up to 3,000 docs per collection, ranges to 12 months or "all"), MTBF (all closed breakdowns of a machine), contractor metrics, MTTR, SLA, PM compliance, MOE, machine history, and the AI "past repairs on this machine".
- **Supervisors can read every work order in the company** (needed by the Analytics page) and can delete them — the 30-day limit has to be a security rule, not a screen filter.
- **Other roles read closed records too:** technician, trainee, floor operator, store keeper, HR, safety officer.
- **Training analytics and compliance read all assignments** plus certificates; the retraining-due trigger listens to the wrong certificate path today, so it never fires.
- **Notifications are role-targeted** with per-user read lists, and only an admin can delete them.
- **Record-access requests already exist** (plant manager / admin approves, 24 h – 30 d snapshot) but cover work orders and breakdowns only, not work permits.

Build order

Step	Effort
1 · Per-record summaries written at close + monthly rollups; backfill all existing closed records; switch analytics, MTBF, contractor metrics, AI history and PM compliance to them; compare totals before and after	≈ 2 weeks
2 · Security rules: 30-day window for all roles except plant manager / admin (safety officer for permits); remove supervisor delete; extend access grants to work permits and attachments	4–5 days
3 · Training and trainee clean-up jobs; fix the retraining trigger path; store certificate PDFs at issue	≈ 4 days
4 · Notifications: resolve recipients at creation, delete when all have read, 30-day cap	≈ 2 days
5 · ZIP archive + 12-month removal (page 8), backup and dry run first	3–4 weeks
6 · Terms, FEATURES.md / CLAUDE.md, admin help text	≈ 2 days

Risks

- **Irreversible deletion** of years of customer history: notice + 90-day grace, ZIP first, point-in-time backup, per-company opt-in at launch, legal hold, audit log, dry run.
- **Permits, incidents, competence records** are often legally required for years — keep a permanent summary and give the admin the ZIP; take local legal advice before removing detail.
- **Reopened records** must refresh or remove their summary.
- **Stock movements, purchase orders, invoices** may be needed for accounting — proposed to keep.

Pricing effect and open choices

- A single 12-month online window for plant managers / admins replaces the 12 / 18 / 24-month windows by plan; longer online history is now an add-on. Hot storage and dashboard reads both fall, so margins rise (Growth 82%, Factory 78% at typical use).
- **Analytics history by plan** (12 months / 36 months / all) is my suggestion — with kept rollups it costs little, so it could be unlimited on every plan.
- Confirm: safety cases like permits? machine repair log for supervisors? who loses per-record access (HR, store keeper, safety officer)? archive ZIP then delete at 12 months?

Enterprise: how to set limits and price a quote

No line is unlimited. Size each limit from the customer's inputs, price it from the table, add the lines, apply the rules below.

Line	Unit	How to size the limit (from customer inputs)	List price	Volume tiers	Our est. cost (basis)
Platform base	contract / mo	All modules, 1 plant, standard support, onboarding call	**$500**	—	≈ $15 fixed jobs & email
Extra plant	plant / mo	Number of plants beyond the first	**$150**	—	≈ $10 (jobs, support)
Full users	user / mo	Admins, managers, supervisors, technicians, store, HR, safety staff × 1.15	**$9**	51–100: $8 · 101+: $7	$0.26–0.79 (reads)
Light users	user / mo	Floor operators + trainees × 1.15	**$1.50**	251+: $1.20	$0.05–0.16
Machines	machine / mo	Asset register count × 1.25 (PM schedules included up to 10 per machine)	**$0.60**	1,001+: $0.40	≈ $0.05 (paginated)
Work orders	per 1,000 / mo	Machines × 3 per month × 1.5 headroom (use their real history if they have it)	**$12**	—	$0.6–2 (media + triggers)
Breakdown reports	per 1,000 / mo	Machines × 2 per month × 1.5 headroom	**$10**	—	$0.4–1.5
Inventory parts	per 1,000	Catalog size × 1.25. Above 25,000 parts only after the whole-catalog read fix is built	**$6**	—	$1.6–4.8 per 1,000 (10 inventory users)
Online file history	GB kept online	(WOs × 16 MB + breakdowns × 10 MB) × months online (default 12; older files go to the ZIP archive)	**$0.10**	> 1,000 GB: $0.07	≈ $0.035
Largest file	setting	Default 100 MB (video 200 MB); 500 MB video only on request	**incl. / +$50**	+$50 for 500 MB	download cost grows
AI credits	credit / mo	Full users × 15 (1 credit = plain call, 6 = web-research call)	**$0.05**	> 5,000: $0.04	$0.02
History window	setting	Years of data dashboards must load: 60 months included	**incl.**	120 mo +$40 · full +$100	dashboard reads
Contractors	per 100	Registered contractors × 1.25	**$15**	—	≈ $1
Safety invites	per 500 / mo	Contractor visits per month × team members trained	**$10**	—	≈ $1 (email)

* Quote B's 60,000 parts is above the safe limit until the parts-catalog listeners are fixed — build that first, or cap parts at 25,000.

Quoting rules

- **1. When Enterprise applies:** more than 40 full users, more than 400 machines, more than one plant, or contract terms beyond the standard plans. If the list total is under $1,000, sell Factory.
- **2. Minimum:** $1,000 / month, annual contract.
- **3. Discounts:** annual prepay −15%; two-year prepay −20%; no other discounts without founder approval (keep margin ≥ 70% in the stress case).
- **4. Every line has a number** — nothing "unlimited"; write the limits into the contract, together with the retention windows (supervisors 30 days, plant manager / admin 12 months by default).

After signing

- **Overage:** 1.5× the unit price for usage above a limit; 10% burst allowance before uploads or creates pause.
- **Review:** usage vs limits every quarter; re-quote at renewal using real usage.
- **Billing:** Lumora sets the plan in the platform console and invoices manually (no self-serve Stripe price).
- **Cost check:** re-run margin when Firebase read volume or AI cost changes.
